REMARKS

1. Fasting glucose is borderline elevated (impaired fasting glucose). 2. HbA1c 5.8% indicates prediabetes — lifestyle modification strongly advised. 3. Dyslipidemia noted — elevated LDL (142) and TG (180), low HDL (38). Suggest dietary changes and increased physical activity. 4. Trace glucose in urine correlates with elevated blood glucose. 5. All other parameters within normal limits. Clinical correlation advised — follow up with treating physician for prediabetes management.
